## **ABSTRACT**

In today's fast-moving and globalized world, it is nearly impossible to imagine our everyday life without mobile phones. It can be said as one of the most successful inventions of the 20th century, which has become a convenient means of communication. Modern mobile phones perform many other functions as well. They can replace devices such as music players, cameras and organizers. Most of them also provide Internet access and free messaging. There is nothing strange in this fact as modern people need phones in all spheres of lives no matter for professional or personal use. Today's world is a world of technology and inventions, and there are many tools which essentially facilitate our life. Mobile phones especially mobile applications play an important role in the development of human civilization, but their excessive use brings severe problems. Hence, by checking and monitoring finger reflexes from time to time, it will help the mobile phone users to stay away from these unnecessary musculoskeletal disorders and also finger reflexes problem.

## **ACKNOWLEDGEMENT**

First and foremost, I would like to thank my family for their unshakable support and love as I have gone through good and bad times doing my undergraduate back in my hometown. I dedicated my journey of my degree to them with hope that I will ace the course and graduate from the university with flying colors.

My journey will not be easy without the presence of my beloved supervisor, Ms. Goh Kim Nee. I would like to thank her for her guidance and uttermost support in providing platform to grow and learn throughout my final year project period. Her patience and determination in making sure I made the best out of my project has inspired me to strive for excellence. Ms. Goh Kim Nee's passion in sharing knowledge and her likable personality makes me feel comfortable working under her supervision. Once again, thank you very much for being there for my final year project.

My project in the campus would not be fun and enjoyable environment without my colleagues and friends from Information Communication Technology and Business Information System. Thank you everyone for your guidance and support throughout the period.

Last but not least, I would like to acknowledge everyone that has helped me directly and indirectly in completing my project. God bless you all for your good deeds.
