CERTIFICATION OF ORIGINALITY

This is to certify that I am responsible for the work submitted in this project, that the original work is my own except as specified in the references and acknowledgements, and that the original work contained herein have not been undertaken or done by unspecified sources or persons.

(Ngu Cheng En)

ABSTRACT

Textbooks have wide and varied definitions and one of the common definition is that a textbook is a printed and bound artifact for every different course or branch of study (Encyclopedia of Education, 2008a). It is important and the major resource in education. However, despite of the abundance of knowledge, fact and ideas available inside the textbook, textbooks are not appreciated by most of the new generation, the gen Y or the Millenials. The Millennials are the generation who grew up surrounded by technological advances such as smartphones, computers, internet, etc. Therefore, they're tend to use different approaches to learn something instead of relying on the textbooks. Traditional textbooks are unable to captivate the interest of the Millennials because it is unable to provide the interactive learning experience like what technology provided. Therefore, an augmented reality (AR) textbook will be developed to increase textbook interactivity. A survey had been conducted on students inside the target age group which is from 17 to 24 years old. From the data collected, majority of the students participated in the survey chose videos and pictures over words as their preferable study medium. In addition to that, majority of them own at least a smartphones or tablets. These results suggests that augmented reality textbook has huge potential in education as it includes both video and picture and the function is supported by smart devices.

ACKNOWLEDGEMENT

This project becomes a reality with the kind support and help of many individuals. I would like to extend my sincere thanks to all of them.

First and foremost, I would like to express my gratitude towards my family for the encouragement which helped me in completion of this project. My family were always there for me when times I needed them most.

I would like to express my special gratitude and thanks to my supervisor, Associate Professor Dr Dayang Rohaya Bt Awang Rambli for imparting her knowledge and expertise in this project. Her guidance and support helped me significantly during this eight months of doing final year project.

I would also like to express my gratitude to Madam Roselind Wan, my co-supervisor in this project for providing me valuable feedbacks and sharing her experience.

I am highly indebted to Universiti Teknologi Petronas for providing the platform for me to develop and train myself in handling a project.

Lastly, I would like to thank everyone who have contributed to the project especially those who offered assistance when I faced problems in this project.
