ACKNOWLEDGEMENTS

The completeness of this undertaking could not have been possible without the participation and assistance of so many people whose names may not all be enumerated. Their contribution are sincerely appreciated and gratefully acknowledged. However, I would like to express my deepest appreciation and indebtedness particularly to the following:

Dr. Ahmad Shahrul Nizam Isha, for his excellent guidance, caring, patience, and providing me with an excellent atmosphere for doing this consultancy project.

My fellow batch mates for the stimulating discussions, for the sleepless nights we were working together before deadlines, and for all the fun we have had in the last two years.

Miss A. Kalaivanee, whom my project would not even have been possible without her faith in me.

Mr. G. Pakeanathan and Mrs. A. Selvarani for their endless love and support, both morally, and financially.

Mr. P. Pravin, Miss P. Lavaniya and Mr. P. Arvind, for encouraging me with their best wishes throughout writing this thesis and my life in general.

Mr. S. Davendren for always being there cheering me up and stood by me through the good times and bad.

Above all, to the Great Almighty, the author of knowledge and wisdom.

I thank you.
