

LIST OF FIGURES

Figure 1.1	Typical setting of laser attenuation method for quantification of suspended particles	2
Figure 1.2	Droplet size and velocity measurement in jet by using LDA/PDA system ...	3
Figure 1.3	PDPA technique for droplet size measurement	3
Figure 2.1	The process of laser attenuation	6
Figure 2.2	Input-output calibration curve for laser power meter, using neutral density filters of known attenuation	7
Figure 2.3	Schematic illustration of: (a) spontaneous emission, (b) stimulated emission, and (c) absorption	8
Figure 2.4	Electromagnetic wave with a coherence time of τ_0	10
Figure 2.5	Scheme of a laser	11
Figure 2.6	Divergence of a plane electromagnetic wave due to diffraction	12
Figure 2.7	Modes of light scattering	13
Figure 2.8	The average absorption of an infinitely thin slice under diffuse illumination is related to the average path of the light in the medium	14
Figure 2.9	Light scattered by an infinitely thin layer containing light-scattering particles at a concentration c	15
Figure 3.1	Flow chart of the project	19
Figure 3.2	Gantt chart for the project in July 2008 semester	20
Figure 3.3	Gantt chart for the project in January 2009 semester	21
Figure 4.1	The first design of laser attenuation measurement system	23
Figure 4.2	The second design of laser attenuation measurement system	23
Figure 4.3	The first unselected sketch of laser attenuation measurement system	24
Figure 4.4	The second unselected sketch of laser attenuation measurement system	24
Figure 4.5	The completed laser attenuation measurement system	25
Figure 4.6	The detached measurement system	25
Figure 4.7	Internal view of laser box	26
Figure 4.8	External view of laser box	26
