Chapter

1.	INTRODUCTION		
	1.1 Background		
		1.1.1 Adverse Effects of Corrosion	1
		1.1.2 Monitoring Techniques	2
	1.2	Motivation	4
	1.3	Objective	5
	1.4	Scope of Study	5
	1.5	Thesis Outline	5
2.	LITH	ERATURE REVIEW	8
	2.0	Overview	8
	2.1	Corrosion	8
		2.1.1 Faraday's Law 1	3
		2.1.2 Types of Corrosion 1	3
		2.1.2.1 Uniform Corrosion 1	4
		2.1.2.2 Localized Corrosion 1	4
	2.2	Review of Corrosion Monitoring Techniques	
		2.2.1 Physical Monitoring Techniques 1	6
		2.2.1.1 Weight Loss Method (Corrosion Coupon) 1	6
		2.2.1.2 Electrical Resistance (ER) 1	7
		2.2.2 Electrochemical Monitoring Techniques 1	8
		2.2.2.1 Linear Polarization Resistance (LPR) 1	9
		2.2.2.2 Electrochemical Impedance Spectroscopy (EIS) 2	20
		2.2.2.3 Electrochemical Noise (EN) 2	!1
	2.3	Overview of Multielectrode Array Corrosion Monitoring Technique. 2	2
	2.4	Working Principle of CMAS 2	28
	2.5	Maximum Localized Corrosion Rate Equation and Parameters	:9
	2.6	Introduction to Planar PCB-based MAS 3	\$2
	2.7	Summary 3	3
3.	MET	THODOLOGY	34
	3.0	Overview	;4
	3.1	Designing the Planar PCB-Based MAS	\$4
		3.1.1 Design Criteria	\$4

3.1.3 Schematic Layout of PCB-Based MAS 39 3.1.4 Board Layout of PCB-Based MAS 41 3.2 Fabrication of Planar PCB-Based MAS 44 3.3 Characterization of PCB-Based MAS 47 3.3.1 Experimental Setup 47 3.3.1 First Experimental Setup 50 3.3.1.2 Second Experimental Setup 50 3.3.1.3 Third Experimental Setup 54 3.3.2 Data Acquisition and Analysis 54 3.3.3 Switching Circuit 58 3.4 Summary 60 4. RESULTS AND DISCUSSION 61 4.1 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 64 4.2 Effects of Conformal Coating on PCB-Based MAS 69 4.2.1.1 Bare PCB-based MAS in Sea Salt Solution 64 4.2 Effects Observed in NaCl Solution 69 4.2.1.3 Epoxy Conformal Coating 73 4.2.1.4 Comparison of Three Conformal			3.1.2 Soft	ware Tool	37
3.1.4 Board Layout of PCB-Based MAS 41 3.2 Fabrication of PCB-Based MAS 44 3.3 Characterization of PCB-Based MAS 47 3.3.1 Experimental Setup 47 3.3.1.1 First Experimental Setup 48 3.3.1.2 Second Experimental Setup 50 3.3.1.2 LEIS Setup for Results Validation 52 3.3.1.3 Third Experimental Setup 54 3.3.2 Data Acquisition and Analysis 54 3.3.3 Switching Circuit 58 3.4 Summary 60 4. Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 61 4.1.2 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 64 4.2 Effects of Conformal Coatings on PCB-Based MAS Performance 69 4.2.11 Expression of Three Conformal Coating 71 4.2.12 Cyanoacrylate Conformal Coating 75 4.2.2 Effects Observed in HCI Solution 76 4.2.2.4 </td <td></td> <td></td> <td>3.1.3 Sch</td> <td>ematic Layout of PCB-Based MAS</td> <td>39</td>			3.1.3 Sch	ematic Layout of PCB-Based MAS	39
3.2 Fabrication of Planar PCB-Based MAS. 44 3.3 Characterization of PCB-Based MAS. 47 3.3.1 Experimental Setup 47 3.3.1.1 First Experimental Setup 50 3.3.1.2 Second Experimental Setup 50 3.3.1.2.1 EIS Setup for Results Validation 52 3.3.1.2.1 EIS Setup for Results Validation 52 3.3.1.2.1 EIS Setup for Results Validation 52 3.3.2 Data Acquisition and Analysis 54 3.3.3 Switching Circuit 58 3.4 Summary 60 4. RESULTS AND DISCUSSION 61 4.1 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 64 4.2 Effects of Conformal Coatings on PCB-Based MAS 69 4.2.1 Acrylic Conformal Coating 71 4.2.1 Acrylic Conformal Coating 73 4.2.1 Acrylic Conformal Coating 75 4.2.2 Effects Observed in NaCl Solution 69 4.2.1.2 Cyanoacrylate Conformal Coating </td <td></td> <td></td> <td>3.1.4 Boa</td> <td>rd Lavout of PCB-Based MAS</td> <td>41</td>			3.1.4 Boa	rd Lavout of PCB-Based MAS	41
3.3 Characterization of PCB-Based MAS. 47 3.3.1 Experimental Setup 47 3.3.1.1 First Experimental Setup 50 3.3.1.2 Second Experimental Setup 50 3.3.1.3 Third Experimental Setup 54 3.3.2 Data Acquisition and Analysis 54 3.3.3 Switching Circuit 54 3.3.3 Switching Circuit 60 4. RESULTS AND DISCUSSION 61 4.1 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 61 4.1.2 Acrylic Conted PCB-based MAS in Sea Salt Solution 64 4.2.1 Effects of Conformal Coating on PCB-Based MAS Performance 69 4.2.1.2 Cyanoacrylate Conformal Coating 73 4.2.1.2 Cyanoacrylate Conformal Coating 73 4.2.1.3 Epoxy Conformal Coating 74 4.2.2 Cyanoacrylate Conformal Coating 75 4.2.1 Acrylic Contormal Coating 76 4.2.2.2 Cyanoacrylate Conformal Coating 78 4.2.2.3 Com		3.2	Fabrication	of Planar PCB-Based MAS	44
3.3.1 Experimental Setup 47 3.3.1.1 First Experimental Setup 48 3.3.1.2 Second Experimental Setup 50 3.3.1.2.1 EIS Setup for Results Validation 52 3.3.1.3 Third Experimental Setup 54 3.3.2 Data Acquisition and Analysis 54 3.3.3 Switching Circuit 58 3.4 Summary 60 4. RESULTS AND DISCUSSION 61 4.1 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 64 4.2 Effects of Conformal Coatings on PCB-Based MAS Performance 69 4.2.1 Effects Observed in NaCl Solution 69 4.2.1 Actific Conformal Coating 73 4.2.1 Cyanoacrylate Conformal Coating 75 4.2.2 Cyanoacrylate Conformal Coating 76 4.2.2.1 Actific Conformal Coating 76 4.2.2.2 Copanari		3.3	Characteriz	ation of PCB-Based MAS	47
3.3.1.1 First Experimental Setup. 48 3.3.1.2 Second Experimental Setup 50 3.3.1.2.1 EIS Setup for Results Validation 52 3.3.1.3 Third Experimental Setup 54 3.3.2 Data Acquisition and Analysis 54 3.3.3 Switching Circuit 58 3.4 Summary 60 4. RESULTS AND DISCUSSION 61 4.0 Overview 61 4.1 Corrosion Detection Capabilities of PCB-Based MAS 61 4.1.1 Bare PCB-based MAS in Sea Salt Solution 64 4.2 Effects of Conformal Coatings on PCB-Based MAS Performance 69 4.2.1 Effects of Conformal Coating on PCB-Based MAS Performance 69 4.2.1.1 Acrylic Conformal Coating 73 4.2.1.2 Cyanoacrylate Conformal Coating 73 4.2.1.3 Epoxy Conformal Coating 74 4.2.1.4 Comparison of Three Conformal Coating 75 4.2.2 Effects observed in HCI Solution 76 4.2.2.1 Acrylic Conformal Coating 78 4.2.2.2 Cyanoacrylat			3.3.1 Exp	erimental Setup	47

LIST OF TABLES

Table 3.1: HCl and NaCl corrosive solutions were used in second experiment. The highlighted boxes represent the number of days for a particular concentration	50
Table 4.1: Comparison of PCB-based MAS and EIS corrosion rates	84
Table 4.2: Correlation among three samples of PCB-based MAS is	
reliability of PCB-based MAS	90
Table 4.3: Correlation of three samples of PCB-based MAS with a	
reference sample is calculated by finding the correlation coefficient to check repeatability of PCB-based MAS	92

LIST OF FIGURES

Figure 2.1: Corrosion phenomenon is shown. Electrons produced at the
flow of electrons produces corresion current
Figure 2.2: A typical galvania call is shown along with the chamical
reactions. The bettern works on the same principle. When one
electrode (anode) correctes its conde current in the conductive
electrode (allode) corrodes its sends current in the conductive
Figure 2.2. Calcaria call formed with a maximum claster late and alexter late
of a single metal
Figure 2.4:(a) Corrosion of a metal piece is shown with respect to a
galvanic cell. (b) the anode and cathode appear on the single
metal piece. (c) the corroding metal in a corrosive
environment with anode and cathode and the metal acting as
the conductive path itself
Figure 2.5:Corrosion of a ferritic stainless steel door in a sulphur-
containing atmosphere
Figure 2.6: Pitting corrosion along the seam-weld, induced by chloride
ions. caused failure of this stainless
steel
Figure 2.7: Corrosion coupons, Source: [9]
Figure 2.8: Typical ER probes. Source: [12]
Figure 2.9: Schematic of LPR measurement. Source: [16]
Figure 2.10: Schematic of the impedance measured by EIS
Figure 2.11: Multielectrode system used by Schiessl to monitor corrosion
of steel in concrete. This system consisted of multiple steel
anodes all coupled separately to a corrosion resistant cathode.
Source: Ref [27]
Figure 2.12: Coupled multielectrode array used by Fei, et al. to study the
spatiotemporal behavior of iron metal in sulphuric acid. The
current of each electrode was measured independently using a
zero resistance ammeter box. Source: [27]
Figure 2.13: Coupled multielectrode array system used by Tan (a) shows
the measurement of open circuit potential of each electrode.
(b) The current measurement of each electrode. (c)
measurement of tafel slopes of each electrode. Source:
[27]
Figure 2.14: Typical CMAS Probes. Source [27]
Figure 2.15: (a) Electrodes of CMAS isolated from each other and
connected externally through resistors (b) Schematic of a
CMAS probe. Source: [31]
Figure 2.16: The localized corrosion of metal is shown where the current
between anode and cathode flows within the metal surface.

CMAS consist of electrodes isolated from each other but connected externally through resistors. Source: [27]	29
Slightly corroded electrode with local anodic sites	31
Figure 3.1: The conversion from cylindrical to planar design is shown. The electrodes in a CMAS probe are connected directly to the resistors. However, in planar design a conductive path is required between the electrodes and the current measurement device	37
Figure 3.2: The schematic layout editor window of Eagle software has the action tool bar on the upper side while the command tool bar on the left side. Schematics can be easily drawn by using different tabs in the tool bars. A simple relay is shown as an	20
Figure 3.3: The board layout editor window in Eagle software is similar to the schematic layout editor window with almost similar tool bars. The exception is that in the board layout only the foot prints of the components appear in the circuit. As the five pins of the relay can be seen in this board	38
layout Figure 3.4: The schematic of Design 1 of PCB-based MAS. Pin heads are	39
used to schematize the electrodes and the contact pads	40
Figure 3.5: Schematic layout of Design 2 of PCB-based MAS	40
Figure 3.6: Schematic layout of Design 3 of PCB-based MAS	41
of the sensor while IP1 IP0 represents the contact pads	12
Figure 3.8: Board layout of Design 2. JP1-JP10 represents the electrodes of the sensor while JP10-JP12 represents the contact pads	42
Figure 3.9: Board layout of Design 3, JP1-JP10 represents the	10
electrodes of the sensor while JP11-JP20 represents the	
contact pads	43
Figure 3.10: Flow chart for PCB fabrication	44
Figure 3.11: Fabricated PCB of Design 1	46
Figure 3.12: Fabricated PCB of Design 2	46
Figure 3.13: Fabricated PCB of Design 3	47
Figure 3.14: Schematic of the measurement setup. The Cu electrodes were	
immersed in sea salt solution and allowed to corrode.	
Corrosion current is then measured using Keithley 6487	
Picoammeter attached to contact pads and common coupling	
point	49
Figure 3.15: Three samples of PCB-based MAS each coated with acrylic,	
cyanoacrylate and epoxy conformal coatings respectively	51

Figure 3.16: (a) Experimental setup for testing the effects of conformal coatings on PCB-based MAS performance in HCl and NaCl	
(b) Keithley 6487 Piccommeter interfaced with computer	51 51
(c) Six samples of PCB-based MAS immersed in corrosive	51
solution	51
Figure 3.17: (a) EIS cell containing the working electrode, the PCB	
unit with four channels interfaced with a PC. (c) connections	
made for reference electrode, counter electrode and working	
electrode with the data acquisition unit	53
Figure 3.18: (a) Experimental setup to check the repeatability of PCB-	
sensor for current measurement	54
Figure 3.19: Keithley 6487 Picoammeter interface with the computer	
through ExceLinx program. All the control parameters for	
computer	55
Figure 3.20: Connection of picoammeter probes is shown. The black	
probe is connected to the common coupling point and the	
Figure 3.21: The current measured from picoammeter is recorded in	56
Excel sheet. To make data more reliable 10 readings are	
taken for each electrode current measurement. Mean of	
these 10 readings is highlighted in bold	56
Figure 3.22: Switching circuit for electrode current measurement was	50
designed and simulated in Crocodile software. The	
electrodes are simulated as current sources, while the LEDs indicates the current flowing to the piccommeter	50
Figure 3.23: The fabricated switching circuit. 10 relays and a 10 on off	39
dip switch package was used to achieve easy switching for	
electrode current measurement. Each electrode is selected	
for current measurement by just turning on the switch.	60
