                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                  0.0	0,6048	3.4474	3,5000	5.70
0.0	0.5617	3.4546	3,5000	6.15
0.0	0.7457	4.9441	5.0000	6.63
0.0	0.7457	4.9441	5,0000	6.63

e: UL Listed transformers 25KVA and greater have a  $\pm 10\%$  tolerance on r nameplate impedance.

#### Ite 1.3. Impedance Data for Single Phase Transformers

	Suggested	Normal Range	Impedance Multipliers*			
	X/R Ratio	of Percent	For Line-to	-Neutral		
Α	for	Impedance (%Z)*	Faults			
	Calculation		for %X	for%R		
0	1,1	1.2-6.0	0.6	0.75		
5	1.4	1.2-6.5	0.6	0.75		
0	1.6	1.2-6.4	0.6	0.75		
0_	1.8	1.2-6.6	0.6	0.75		
2.0	2.0	1.3-5.7	0.6	0.75		
7.0	2.5	1.4-6.1	1.0	0.75		
0.0	3.6	1.9-6.8	1.0	0.75		
3.0	4.7	2.4-6.0	1.0	0.75		
0.0	5.5	2.2-5.4	1.0	0.75		

tional standards do not specify %Z for single-phase transformers. Consult anufacturer for values to use in calculation.

ised on rated current of the winding (one-half nameplate kVA divided by condary line-to-neutral voltage).

xte: UL Listed transformers 25 KVA and greater have a  $\pm$  10% tolerance on air impedance nameplate.

its table has been reprinted from IEEEStd 242-1986 (R1991), IEEE ecommended Practice for Protection and Coordination of Industrial and ommercial Power Systems, Copyright© 1986 by the Institute of Electrical Id Electronics Engineers, Inc. with the permission of the IEEE Standards epartment.

## Table 1.4. Impedance Data for Single Phase and Three Phase Transformers-Supplement[†]

KVA			Suggested
10	30	%Z	X/R Ratio for Calculation
10		1.2	1.1
15		1.3	1.1
	75	1.11	1.5
	150	1.07	1.5
	225	1.12	_1.5
	300	1.11	1.5
333		1.9	4.7
500	<u> </u>	2.1	5.5

These represent actual transformer nameplate ratings taken from field installations.

Note: UL Listed transformers 25KVA and greater have a  $\pm\,10\%$  tolerance on their impedance nameplate.

#### Table 2. Current Transformer Reactance Data Approximate Reactance of Current Transformers*

Primary Current	Reactance in Ohms for imary Current Various Voltage Ratings					
Ratings - Amperes	600-5000V	7500V	15,000V			
100 - 200	0.0022	0.0040				
250 - 400	0.0005	0.0008	0.0002			
500 - 800	0.00019	0.00031	0.00007			
1000 - 4000	0.00007	0.00007	0.00007			

Note: Values given are in ohms per phase. For actual values, refer to manufacturers' data.

This table has been reprinted from IEEE Std 241-1990, IEEE Recommended Practice for Commercial Building Power Systems, Copyright[®] 1990 by the Institute of Electrical and Electronics Engineers, Inc. with the permission of the IEEE Standards Department,

#### Table 3. Disconnecting Switch Reactance Data (Disconnecting-Switch Approximate Reactance Data, in Ohms*)

**Note:** The reactance of disconnecting switches for low-voltage circuits (600V and below) is in the order of magnitude of 0.00008 - 0.00005 ohm/pole at 60 Hz for switches rated 400 - 4000 A, respectively.

*For actual values, refer to manufacturers' data.

0.00004

This table has been reprinted from IEEE Std 241-1990, IEEE Recommended Practice for Commercial Building Power Systems, Copyright[®] 1990 by the Institute of Electrical and Electronics Engineers, Inc. with the permission of the IEEE Standards Department.

3/0	.0668	.0643	.1060	.1050	.0400	.0320	.0300	.0261
4/0	.0534	.0511	.0844	.0838	.0393	.0314	.0295	.0257
250	.0457	.0433	.0722	.0709	.0399	.0319	.0299	.0261
300	.0385	.0362	.0602	.0592	.0393	.0314	0295	.0257
350	.0333	.0311	.0520	.0507	.0383	.0311	.0290	.0254
400	.0297	.0273	.0460	.0444	.0385	.0308	0286	.0252
500	.0244	.0220	.0375	.0356	.0379	.0303	.0279	.0249
600	.0209	.0185	.0319	.0298	.0382	.0305	.0278	.0250
750	.0174	.0185	.0264	.0240	.0376	.0301	.0271	.0247
1000	.0140	.0115	.0211	.0182	.0370	.0296	.0260	.0243

Note: Increased resistance of conductors in magnetic raceway is due to the effect of hysteresis losses. The increased resistance of conductors in metal non-magnetic raceway is due to the effect of eddy current losses. The effect is essentially equal for steel and atuminum raceway. Resistance values are acceptable for 600 volt, 5KV and 15 KV insulated Conductors.

Size	Reactar	100 - 5KV			Reactance - 15KV

#### Selective Coordination (Blackout Prevention)

Having determined the faults that must be interrupted, the next step is to specify Protective Devices that will provide a Selectively Coordinated System with proper Interrupting Ratings.

Such a system assures safety and reliability under all service conditions and prevents needless interruption of service on circuits other than the one on which a fault occurs.

The topic of Selectivity will be Discussed in the next Handbook, EDP II.

#### **Component Protection (Equipment Damage Prevention)**

Proper protection of electrical equipment requires that fault current levels be known. The characteristics and let-through values of the overcurrent device must be known, and compared to the equipment withstand ratings. This topic of Component Protection is discussed in the third Handbook, EDP III. rmoured
